

## Weekly Market Commentary October 26, 2015

### The Markets

Central banks were at it again – and markets loved it.

Last week, European Central Bank (ECB) President Mario Draghi surprised markets when he indicated the ECB's governing council was considering cutting interest rates and engaging in another round of quantitative easing. *The Economist* explained European monetary policy was heavily tilted toward growth before the announcement:

“The ECB is already delivering a hefty stimulus to the Euro area, following decisions taken between June 2014 and early 2015. It has introduced a negative interest rate, of minus 0.2%, which is charged on deposits left by banks with the ECB. It has also been providing ultra-cheap, long-term funding to banks provided that they improve their lending record to the private sector. And, most important of all, in January it announced a full-blooded program of quantitative easing (QE) – creating money to buy financial assets – which got under way in March with purchases of €60 billion (\$68 billion) of mainly public debt each month until at least September 2016.”

Despite these hefty measures, recovery in the Euro area has been anemic, and deflation remains a significant issue. According to Draghi, Euro area QE is expected to continue until there is “a sustained adjustment in the path of inflation.” Europe is shooting for 2 percent inflation, just like the United States.

The People's Bank of China (PBOC) eased monetary policy last week, too. On Monday, data showed the Chinese economy grew by 6.9 percent during the third quarter, year-over-year. Projections for future growth remain muted, according to *BloombergBusiness*. On Friday, the PBOC indicated it was cutting interest rates for the sixth time in 12 months.

U.S. markets thrilled to the news. The Dow Jones Industrial Average, Standard & Poor's 500 Index, and NASDAQ were all up more than 2 percent for the week. Many global markets delivered positive returns for the week, as well.

Data as of 10/23/15	1-Week	Y-T-D	1-Year	3-Year	5-Year	10-Year
Standard & Poor's 500 (Domestic Stocks)	2.1%	0.8%	6.4%	13.7%	11.9%	5.6%
Dow Jones Global ex-U.S.	0.6	-2.5	-3.3	3.2	0.4	2.0
10-year Treasury Note (Yield Only)	2.1	NA	2.3	1.8	2.6	4.5
Gold (per ounce)	-1.7	-3.2	-5.8	-12.1	-2.8	9.6
Bloomberg Commodity Index	-2.6	-16.2	-25.4	-15.4	-9.8	-6.4
DJ Equity All REIT Total Return Index	1.2	2.4	8.1	11.6	11.7	7.9

S&P 500, Dow Jones Global ex-US, Gold, Bloomberg Commodity Index returns exclude reinvested dividends (gold does not pay a dividend) and the three-, five-, and 10-year returns are annualized; the DJ Equity All REIT Total Return Index does include reinvested dividends and the three-, five-, and 10-year returns are annualized; and the 10-year Treasury Note is simply the yield at the close of the day on each of the historical time periods.

**IT'S IMPORTANT TO ASK THE RIGHT QUESTIONS.** A recent article in *The Economist* examined the “gig” economy. You know, people selling crafts online, offering their services as taxi drivers, renting their cars and spare bedrooms for short periods. Some folks even rent space on their driveways to commuters. It’s that old American ingenuity and, as it turns out, it’s difficult to quantify.

Analysts expected this employment revolution to be reflected in self-employment statistics. However, the self-employment rate in the United States has declined during the past two decades, according to *Pew Research*.

Why would self-employment be falling when more people appear to be offering services independently? *The Wall Street Journal* suggested several possibilities: 1) The gig model might not be prevalent even though some headline-grabbing companies rely on it; 2) It’s possible gig companies operate in industries that have always depended on independent contractors; or 3) people who do this work may report they are employees of the firms they work for rather than independent contractors.

*The Economist* concurred with the last, suggesting that people do not consider their gigs to be work. If that’s the case, then governments may not be asking the right questions when they try to assess the situation. A British survey that focused its queries on alternative employment found that about 6 percent of respondents participated in the gig economy.

Does it matter? Should anyone be concerned the dimensions of this segment of the economy are relatively unknown? *The Economist* suggests it is important:

“Measuring the gig economy matters. To get a clear picture on living standards, you need to understand how people combine jobs, work, and other activities to create income. And, this gets to the crucial question of whether the gig economy represents a positive or negative development for workers. All this makes it important for official agencies to have a go at measuring it.”

What’s the solution? *The Wall Street Journal* suggested the U.S. Congress might want to reconsider funding the U.S. survey of Contingent and Alternative Employment Arrangements. The last time it was conducted was 2005.

## **Weekly Focus – Think About It**

“The function of education is to teach one to think intensively and to think critically. Intelligence plus character – that is the goal of true education.”

--*Martin Luther King, Jr., Civil rights activist*

Best regards,

**Scott Lebin**

\* Government bonds and Treasury Bills are guaranteed by the U.S. government as to the timely payment of principal and interest and, if held to maturity, offer a fixed rate of return and fixed principal value. However, the value of fund shares is not guaranteed and will fluctuate.

\* Corporate bonds are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate and credit risk as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features.

\* The Standard & Poor's 500 (S&P 500) is an unmanaged group of securities considered to be representative of the stock market in general. You cannot invest directly in this index.

\* The Standard & Poor's 500 (S&P 500) is an unmanaged index. Unmanaged index returns do not reflect fees, expenses, or sales charges. Index performance is not indicative of the performance of any investment.

\* The Dow Jones Global ex-U.S. Index covers approximately 95% of the market capitalization of the 45 developed and emerging countries included in the Index.

\* The 10-year Treasury Note represents debt owed by the United States Treasury to the public. Since the U.S. Government is seen as a risk-free borrower, investors use the 10-year Treasury Note as a benchmark for the long-term bond market.

\* Gold represents the afternoon gold price as reported by the London Bullion Market Association. The gold price is set twice daily by the London Gold Fixing Company at 10:30 and 15:00 and is expressed in U.S. dollars per fine troy ounce.

\* The Bloomberg Commodity Index is designed to be a highly liquid and diversified benchmark for the commodity futures market. The Index is composed of futures contracts on 19 physical commodities and was launched on July 14, 1998.

\* The DJ Equity All REIT Total Return Index measures the total return performance of the equity subcategory of the Real Estate Investment Trust (REIT) industry as calculated by Dow Jones.

\* Yahoo! Finance is the source for any reference to the performance of an index between two specific periods.
